

How to Change Logo and Application Name?

First, let's see how to change the name of the application.

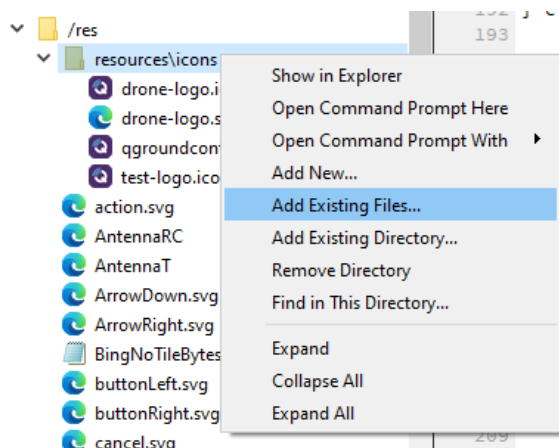

Open qgroundcontrol.pro, search for "**QGC_APPLICATION_NAME**" and change the name as you want below. I changed it to "Wright_Brothers". Delete the build directory after making the changes. Compile it after deleting, otherwise you won't be able to see the change you made for the name.

```
DEFINES += QGC_APPLICATION_NAME=\"\\\\\"Wright_Brothers\\\\\"\"
DEFINES += QGC_ORG_NAME=\"\\\\\"QGroundControl.org\\\\\"\"
DEFINES += QGC_ORG_DOMAIN=\"\\\\\"org.qgroundcontrol\\\\\"\"
RESOURCES += \
```

Changing the logo is also very easy. First add the logo to the resource. We go to the source codes (I assume you downloaded the codes from github). We open the resources folder and add the image to the icons folder.

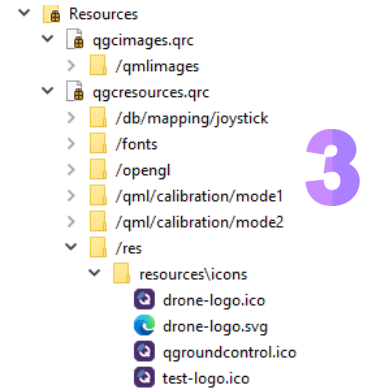

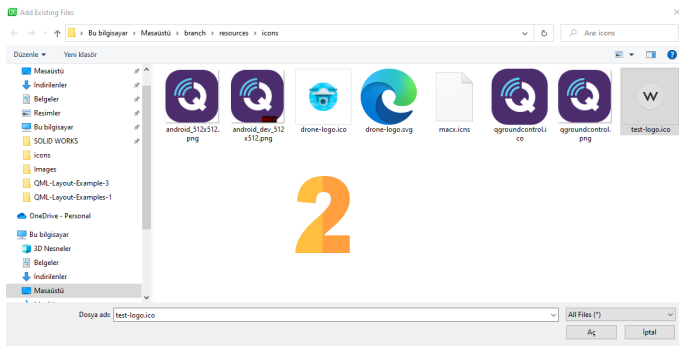

your files → **resources** → **icons**

Now you have to follow the steps below.

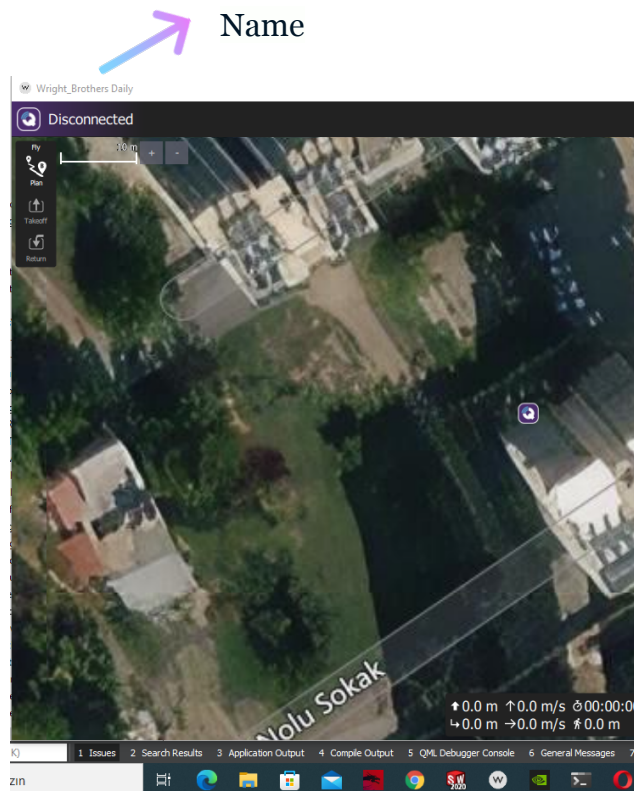

→ Right click and "Add Existing Files"

1

In the .pro file, we must write the name of the logo we want to add to this part.

```
WindowsBuild {
    RC_ICONS = resources/icons/test-logo.ico
    CONFIG += resources_big
}
```

Name

Logo
